2. What are wildcards in MySQL? How are they useful?

The % is the wildcard in MySQL. If I am searching for a gentleman named Dave, but I am not sure if he is in the database as David, I can search with a wildcard…

Select * from Person where First_name like 'Dav%'

3. What is your favorite thing you learned this week?

Creating the DB Connection to the MySQL database. Learning the SOLID principles were good as well, but I think I am going to need more experience to fully grasp their benefits.
